To the Prime Minister and the Chair of Parliament of Bulgaria

Respectable Gentlemen,

We have a pleasure to know a number of outstanding scientists of International recognition who are working at the Institute of Electronics of the Bulgarian Academy of Sciences.

Many of their papers are well known among world's scientific community and frequently cited.

You have to be very proud having such high intellectual manpower resources!!!

However, recently we got from our colleagues very bad news about the complicated financial situation in the Bulgarian Academy of Sciences.

It is obvious that the Natural Sciences, including Physics, play an absolutely important role in all aspects of life of a country. Moreover, through their pedagogical activity, scientists transmit knowledge and scientific culture to the young generation and teach them correct thinking.

Such a strong financial pressure on scientists in Bulgaria means, particularly, also an adequate pressure on whole education system, including schools, in your country.

By saving some amount in your budget and cutting the budget for the Natural Science later (after 15-20 years) you'll find that there is no more good scientists in your country and intellectual manpower resources are close to that in Burkina Faso.

Fortunately, it is not late to stop this financial pressure on Science in Bulgaria.

Care, please, also for your children and grandchildren.

We can't be indifferent to this very dramatic situation with the Science in Bulgaria,

since we like Bulgaria!

Sincerely,
Professor David Sarkisyan
